

# HICOAT<sup>®</sup> - Coated Tungsten Carbide Burrs by PFERD

Under the HICOAT<sup>®</sup> brand PFERD now offers tungsten carbide burrs with three different types of coating that set new standards in this advanced tool class. These products are noted for the following features:

- Reduced tool wear rates
- Improved chip flow through reduced adhesion
- Lower heat loads
- Increased productivity through higher r.p.m. capacity
- Extended service life

PFERD markets these tools with a choice of coatings designed specifically for use on iron and steel (HC-FE), high temperature materials (HC-HT), and nonferrous metals (HC-NFE). The resulting product differentiation allows the user to select the optimum tungsten carbide burr for his individual needs. For more detailed information refer to the PFERD Tool Manual 2000 ([Catalogue 202](#), page 5).
