

# A complete range of PFERD-Flap Wheels

August Rüggeberg GmbH & Co. KG, PFERD-Tools  
presents an expanded performance range of flap wheels.

As a premium global player Rüggeberg has optimized these tools for abrasive surface treatment with the prime objective to further enhance their productivity in everyday use at the customers:

- A high-performance INOX abrasive band quality yields shorter grinding times and cooler grinding properties through active fillers and is particularly suitable for adverse conductive thermal materials such as stainless steels.
- A broad product pallet variety with many grit sizes offers technical optimized, cost-effective and personal solution for our customers' problems for each specific case.
- The changed design of these flap wheels on the one hand allows precise working in corners by means of recessed flanges with new arbor. On the other hand however the regular flanges can still be used.

PFERD-Flap Wheels are designed for universal application on all materials such as steel, high-grade steel, non-ferrous metal, plastic and wood and suitable for surfaces and contours.

If you would like to know more about the Product line extension for PFERD-Flap Wheels, please request our [information](#) documents.
