

# Industrial power brushes "made by PFERD"

Industrial power brushes have featured prominently in PFERD's range of surface finishing tools for the metalworking industry for more than 60 years. Since 1997, PFERD MILWAUKEE BRUSH Co., a leading U.S. brush manufacturer, has been a member of the international PFERD group of companies.

Advanced production systems, combined with exacting manufacturing and safety standards, ensure that the PFERD range of industrial power brushes will continue to meet the most stringent quality criteria:

- extended service life through special high-grade fill wire of high flexibility and bending strength
- high brush concentricity through homogeneous distribution and secure attachment of wires
- unsurpassed finishing performance due to an optimized body-to-fill length ratio
- outstanding value-for-money record

Selecting the optimum brush is now made easy by a color code identifying the wire fill material in our product tables and on the package labels.

A choice of the most commonly used PFERD technical brushes is now also available in attractive retail packages made of recyclable plastic, suitable for self-service displays.

All further details are given in our [Catalogue 208 \(Industrial Wire Brushes\)](#). Order your free copy now, without any purchasing obligation.
